

Spa-Key Synchronize Handset – Instructions pre October 2012

Refer to Step 3

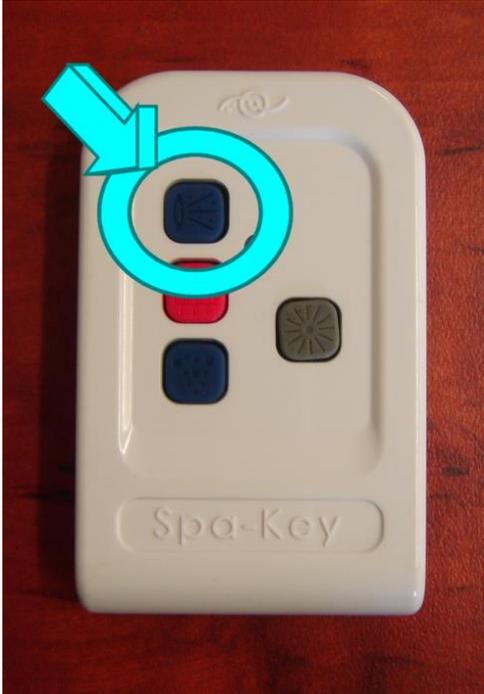

Refer to Step 1 & 2

1. On the top of the pump there is a silicone membrane and you should notice a RED light shining through the membrane, this tells us the pump has power, refer to above right image.
2. Towards the outside edge of the silicone membrane there is a push button under it. Push this button to activate the synchronize mode. Once activated the light through the membrane will alternate between RED & BLUE, refer to above right image.
3. While the pump is in synchronize mode (and LED is alternating), push the pump start button on the remote once. This is the top left dark blue button, refer to above left image.
4. The pump will not start until the synchronize process is complete. Once complete the pump will return to only the RED light shining through the silicone membrane on top.
5. The synchronize time will last for 10 seconds and you can program multiple remotes to the same pump over multiple synchronize times.

NOTE: the remotes do not need to be re-synched if the battery is replaced.

6. Additional Spa-Key remotes can be ordered with Edgetec Part # 6650.

Spa-Key Synchronize Handset – Instructions post October 2012

Refer to Step 3

Refer to Step 1 & 2

1. On some production after October 2012 the silicone membrane is still on top of the pump but this is no longer required for the synchronizing process. To confirm this there should be "NO" RED light shining through the membrane.
2. Most production after October 2012 will not have the silicone membrane on the capacitor cover.
3. To synchronize the spa key pumps produced after October 2012, simply turn the power on to the pump, you now have 15 seconds to push the pump start button on the remote once. This is the top left dark blue button, refer to above left image.
4. After the 15 second time period the spa key pump will momentarily pulse the motor to indicate that the synchronization mode has ended and is now ready to be used.
5. To test that the synchronization has been successful, press the top left dark blue button, refer to above left image and the pump should start. If for some reason the pump does not start repeat the process above.
6. Additional Spa-Key remotes can be ordered with Edgetec Part # 6650.

NOTE: the remotes do not need to be re-synched if the battery is replaced.
